

**Rabbit Anti-Rat Insulin-like Growth Factor II Serum**

AS-2766

Lot # 7808

This antiserum was raised in a rabbit which was immunized with rat insulin-like growth factor II (rat multiplication-stimulating activity covalently attached onto a carrier protein. This antisera is specific for the peptide hormone and is suitable for immunohistochemical detection of rat IGF-II. Dilute the lyophilized antiserum with 0.1 ml of 10 mg/ml BSA in PBS for the equivalent of whole antiserum, or with additional buffer for more dilute antiserum.

<b>Polypeptide</b>	<b>Antiserum Specificity</b>	<b>% Cross Reactivity</b>
Insulin-like growth factor II (rat)		100
IGF-1 (human)		5
Insulin (human)		1
Atrial natriuretic polypeptide (human)		0
EGF		0
TGF $\alpha$		0
